

FINAL PROJECT REPORT

Project Title: VFind – Lost & Found Management System

Duration: 10 Weeks

Product Owner: Sufiyan Khan

Scrum Master: Muhammad Areeb

Development Team: 5 Members

1. Introduction

Lost and misplaced items are a common problem in universities, offices, and public places. Many items are found but never returned to their owners due to the absence of a proper and secure system. **VFind – Lost & Found Management System** is a web-based solution designed to digitally manage lost, found, and recovered items in a safe and organized manner.

The system ensures **security and authenticity** by combining admin moderation with **direct user-to-user contact**, allowing faster and more efficient item recovery while maintaining system control.

2. Objectives of the Project

The main objectives of the VFind system are: - To provide a centralized platform for lost and found item management - To ensure secure handling of recovered items - To allow users to register, login, and report lost items - To display recovered items only after admin verification - To manage all system operations through an admin panel

3. Scope of the Project

Included Scope:

- User registration and login system
- Home dashboard with item statistics
- Lost items listing for all users
- Found (recovered) items display after admin approval
- User profile management
- Admin panel for complete system control

Excluded Scope:

- Direct user-to-user contact
- Payment systems

- Mobile application
-

4. System Users and Roles

4.1 Normal User

- Register and login into the system
- View dashboard statistics
- View lost items posted by users
- Report found items to the admin
- View recovered items only after admin approval
- Manage personal profile

4.2 Admin

- Access secured admin panel
 - Manage users and item records
 - Verify and approve found items
 - Control recovered item listings
 - Ensure system security and authenticity
-

5. System Workflow

5.1 User Workflow

1. User registers if not already registered
2. User logs in to the system
3. Home page opens showing statistics (total lost items, recovered items, etc.)
4. Lost Items page shows all reported lost items
5. Found Items page shows recovered items
6. Users can directly contact each other for item recovery
7. User can access profile and about pages

5.2 Admin Workflow

1. Admin logs in through admin panel
 2. Admin monitors and manages item records
 3. Admin verifies reported items when required
 4. Admin ensures system security and moderation
-

6. System Architecture

- **Frontend:** HTML, CSS, JavaScript

- **Backend:** PHP
- **Database:** SQL (MySQL)
- **Admin Panel:** Separate secured module

The admin panel is **not part of the public frontend** and is accessible only to authorized administrators.

7. Development Methodology (Scrum)

The project follows the **Scrum Agile methodology** and was completed in iterative phases:

Sprint 1: Frontend Development (Weeks 1-3)

- User interface design
- Pages: Login, Register, Home, Lost, Found, Profile, About

Sprint 2: Database & Backend (Weeks 4-6)

- Database design
- PHP backend development
- Authentication and session handling

Sprint 3: Admin Panel Development (Weeks 7-8)

- Admin dashboard
- Item verification and management
- User management

Sprint 4: Testing & Finalization (Weeks 9-10)

- System testing
 - Bug fixing
 - Final deployment
-

8. Team Members and Responsibilities

Role	Name	Responsibilities
Product Owner	Sufiyan Khan	Requirements and backlog management
Scrum Master	Muhammad Areeb	Scrum process and coordination
Frontend Developer	Bazil Ubab	UI using HTML, CSS, JavaScript
Backend Developer	Asad Khan	PHP backend and SQL database
Tester	Muhammad Marij	Testing and quality assurance

9. Security Considerations

- Direct user-to-user contact is allowed after item visibility
 - Admin supervision for sensitive actions
 - Session-based authentication
 - Secure admin panel access
-

10. Challenges Faced

- Designing secure workflow without user contact
 - Managing admin verification logic
 - Database relationship handling
-

11. Conclusion

The **VFind – Lost & Found Management System** successfully provides a secure, organized, and admin-controlled platform for managing lost and recovered items. The project fulfills its objectives and demonstrates effective use of web technologies along with Scrum methodology.
